

**PITCHER'S EYE® INSTRUCTIONS.**  
*No assembly required.*

*Pitcher's Eye® Baseball plates*

*Pitcher's Eye® Baseball plate*

All Pitcher's Eye® Products are designed for practice only — no game use, no live hitting with the product on the field, to includes the plates.

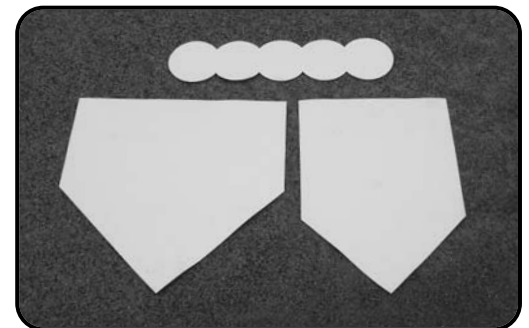

**INSTRUCTIONS AND GLOSSARY OF TERMS**

**Pitcher's Eye® Plates** - black on one side, white on the other side. They are designed to clearly show the plate during practice. The full plate covers the existing plate. Dimensions of the home plates can be a little different. Our full home plates measurements are made to most commonly accepted dimension. Depending what the lesson is you could have the black or white side up.

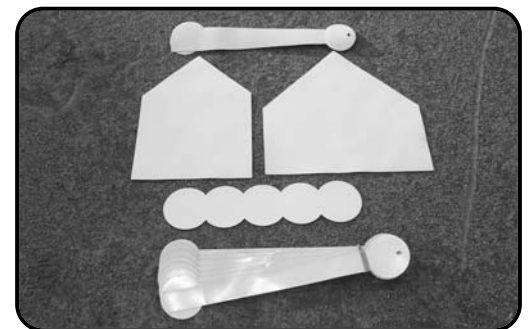

The smaller Pitcher Plate has the corners missing. It also is black on one side and white on the other. It can be used to black out the center of the plate. It could be used in conjunction with the full home plate by simply layering it on top.

**Continuous Balls** - This is a one piece baseball or softball piece depending on the model ordered. Baseball is 7 balls wide, this measures home plate not in inches but by the width of the ball. Softball is 5 balls wide. It could be used by having both the full plate and partial plate with the black side up and the continuous ball piece with the white side up.(insert pictures)

**Streamers** - A great visualization tool. It is our experience to put the streamers on the field it is best to start behind the mound and guide the streamer as you would a dog's leash. Walk it through to set the desired path, never interfere by putting it near a pitcher or catchers footwork. The streamers are permanently connected. They should never be placed to interfere with the pitchers footwork. They should never be placed to interfere with the catchers footwork. They are intended to to make sure the pitcher and catcher see the correct target. **OVER**

*Pitcher's Eye® Softball plates*

*Pitcher's Eye® Plates & Streamers*

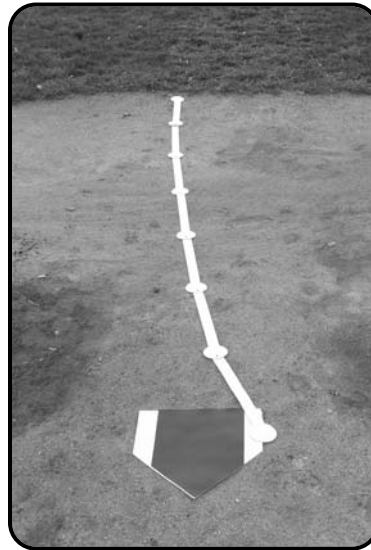

*Pitcher's Eye® Plate, Streamer & Late-Break Streamer*

The Streamers have great flexibility to show the desired pitch location and provide the proper sight line.

**Late Break Streamers** - Permanently connected. It is designed to show the desired path of a breaking pitch. We do not encourage breaking pitches for younger players. It is our belief that breaking pitches should be taught only when a pitcher reaches high school.

Patent Pending

**The Pitcher's Eye®** is designed to show the pitcher and catcher the target as never seen before. Use of the product should greatly assist the pitcher and catcher in the real game. The Pitcher's Eye® is a visualization tool. It is best used with adult/coach supervision. When properly used, the tool can help teach the pitcher to throw fewer, more effective pitches during the game.

**MAKE EVERY PITCH COUNT WITH THE PITCHER'S EYE®.**
